

# FineCode

## Compiler With a Brain

**Join a code session room, Create your own or Find a public room and code alongside coders from across the globe**

# Meet Team MehnatKash

# Problem Statement

In the present scenario, the instructors cannot judge or analyze the individual students code due to the large number of students in a class.

This leads to the student not knowing their standing among their peers as well as doesn't giving the student or the instructor any information regarding the analysis of code.

# About the Project / Solution

- FineCode focuses on building logic over theory.
- The platform would allow multiple students submit codes for a given question.
- The code will then be evaluated based on various parameters depicted visually and then ranked among the students.
- Giving the instructor as well as the student valuable information regarding the code through analysis when compared with the others.

# Parameters

- Similarities with other Submissions
- predicting the approach for the solution
- Time Complexity
- Space Complexity
- Comments Used
- Variable Scopes
- Loops Analysis
- Functions

# Class/ADA

Analyze

A green arrow points from the bottom right towards the circular portraits. Above the arrow is a green wavy line, resembling an ECG signal, which is connected to the 'Analyze' button.

Welcome Back!
